

Class #5 -- Presentations

Navigate to the slide labelled with your group number

Each group will:

- compile a list of the industries in which group members have worked or are working

- for each industry, determine what ideas or activities might be usefully imported from the other industries represented in the group into the industry in question

Group 1: Gabriela Zappitelli, Andrew Steelman, Prashubh Atri, Ayesha Kirpalani, Bernardo Linss

Technology - Fluid talent model in the consulting industry, deploying resources to a broad set of scenarios and situations, can develop talent with a more diverse set of skills and capabilities

Consulting - Customer satisfaction scoring and operational driver tracking from the hospitality industry can be applied to better manage client relationships and enhance value creation

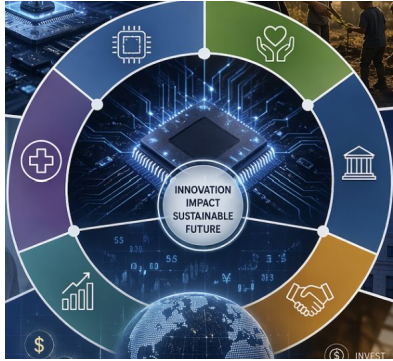

Pharma & Biotech - Data processing technologies and digital product development methodologies are applied to clinical trial operations in order to improve speed in decision making, accuracy, trial planning, and enable continuous improvement

Hospitality: Being an industry very customer driven, hospitality is an industry that is very much in the need of tracking the guest experience. Technology is key to measure the customer satisfaction, and keep a real time measurement of the guest experience.

FinTech: Institutional fintech can combine the guest experience focus of hospitality with the fluid talent model of consulting. By tracking client satisfaction in real time and dynamically deploying specialists where demand is highest, fintech firms can move beyond back-end processing to become proactive, high-value strategic partners.

1) Industries

Hardware tech, Non-profit, Fed reserve, Healthcare Consulting, Finance, Venture Capital

Problems:

1. Hardware Procurement global streamlining difficult
2. Pharmacovigilance - detection of adverse effects on drugs/medications
3. How to efficiently scale back-office operations across the country
4. Overoptimism in investment decisions

2). Activities

- **Hardware Tech:** Capital allocation (Finance), Fundraising (VC), hypothesis testing (Healthcare consulting), System thinking (Non-Profit)
- **Finance:** Long-term, asymmetric thinking, focus on upside potential (VC); technology integration, automation, AI-driven underwriting, faster execution for forecasting and modeling (Hardware tech); Client-centric problem solving, shift from product push (loans, products) to advisory mindset (Healthcare consulting)
- **NPO:** advanced analysis (Finance), stakeholder communication frameworks (HC); simulation and testing (hardware tech)
- **HC:** Valuation & ROI (Fin); Market sizing (VC); product mindset to build product (hardware tech); Policy and regulation (NPO)
- **VC:** structured valuation discipline (Fin); operational diligence (HC); technical understanding (hardware tech); macro sensitivity: rates, macro environment (NPO)

Ideas Applied:

- Invest in technology to scale back-office operations and improve operational efficiency
- Leverage AI models that are used to detect adverse effects on drugs/medications to also predict adverse outcomes in investment decisions
- Non-profit as a third-party testing agency for Pharma companies to detect adverse effects on drugs/medications ("AI-driven Pharmacovigilance")

Group 3:

Seth Weil, Ashley Bembrey-Kaintuck, Aaron Litinetsky

Industries:

- Healthcare
- TV Production
- Consulting
- Corporate Finance

Idea: Healthcare has lots of regulatory oversight to combat misinformation and prevent spurious or potentially harmful products come to market.

Media could borrow some elements of regulatory body oversight to create a independent, non-partisan, publicly funded NGO fact checking service to help monitor news media content and arbitrate for truth.

Group 4:

Sabrina Seneviratne, Javier Navarro-Machuca, Sri Akula,
Yan Li

Industries: Public Relations, Supply Chain, Pharma, Technology

Imported Activities:

- Public Relations (message management and brand protection) when outages happen in technology companies.
- Supply Chain can import autoscaling practices from Technology for unexpected demand (pandemic) by scaling manufacturing capacity from pharma manufacturers (preparedness).
- Pharma → Public Relations: Compliance-driven communication, Risk control & approval processes, High standard for accuracy & transparency

Group 5: Katherine Belgrad, Jasmitha P N, Rohan Y, Isabella Cai

Jasmitha - Software engineer

Katherine - entertainment

Rohan Y - Computer Science Student

Isabella C - Music Producer / DJ

- Apple Music automix / Spotify smart shuffle: Music + AI algorithmic recommendations & playlists
- Using technology for personalization and curation of entertainment
- Listener -> Data -> AI -> Curation -> Artist -> (back to listener)

Group 6:

Alex Kontopanos, Jim Connolly, Xueyao Zhao, Emma Gottsegen, Shi Jie Yu

compile a list of the industries in which group members have worked or are working

- Technology/Entertainment/Media
- Insurance
- IT
- Music/Public Relations
- Technology/Fintech

for each industry, determine what ideas or activities might be usefully imported from the other industries represented in the group into the industry in question

- AI for Insurance: tailoring coverage with direct underwriters
- IT (A/B Testing) → Testing Variations in Music
- Fintech for Music: Bonds for underground musicians, album releases

Group 7: Josh Frohlinger, Campbell Killeen, Yutong Wu, Ricky Baum, Ben Taub

- **Josh & Ben - Sports Media:**
 - Using more financial models (predictive analytics) to find success for sports teams (Moneyball!)
- **Campbell - Advertising (Strategy & Market Research):**
 - Using financial predictive models to guide campaign direction
 - Using sports magazine subscribers to field market research for key clients. Build roster of clients in sports space
- **Ricky - Finance:**
 - Utilize market research surveys to assist with research before making large acquisitions

Group 8: Joshua Adjei, Joy Chu, Michelle Wang, Olivia Burglund

Industries of Members in Group:

- Consulting:
 - Scalability
 - Project Management
 - Automation
- Higher Education:
 - Compliance
 - Policy Creation/Implementation
- Media Partnerships:
 - Strategy
 - Growth
 - UI/UX

Group 9: Eugenia Igarza, Gonzalo Bardin, Jay Daftari, Adam Kovler

Retail/CPG: cross selling products (complementary goods), offer alternative products for category-known brands (“generics”), recommendation-based approach to final users through trusted partners (i.e. Health Care Professionals)

- From Tech: Personalization, A/B testing, subscription models
- From Finance: Portfolio optimization, margin focus, risk management

Software/Tech: Agile methodology - multiple iterations

- From Retail: Customer segmentation, bundling, brand positioning
- From Finance: Capital allocation discipline, governance, unit economics

Finance/Investing: Efficient Corporate Structuring & Business Management

- From Retail: Client experience, cross-selling, brand building
- From Tech: Automation, data infrastructure, productization

Group 10: Mack Glavin, Jamie Varghese, Samantha Lutt, Matt Pulford, Pooja Patel, & Arnab Majumdar

Industries: Financial Services (Mack & Jamie), Healthcare (Samantha), Education (Arnab), Project Management (Matt), & People Operations (Pooja)

- Carve out systematic process in education that is about finding your own way rather than following a path (using ratings system and helping people find their true interests)
- Once students find their own way, they veer off into different paths depending on their interests
- Leverage storytelling to help students find their path, especially given the shorter attention span and competition from social media

Group 11:

Group 12: Names

Group 13:

Katharina Denner, Emily Morales, Ishika Surana, Mario Masaya, Rachel Mira, Ailin Liul

Ads/ marketing
Government / public affairs
Policy/AI research
Event management

Idea/activity: a regular event to pitch or present a GOOD public policy (say AI-use regulations for teens) so that it protects from vested interests of politicians, business lobbyist

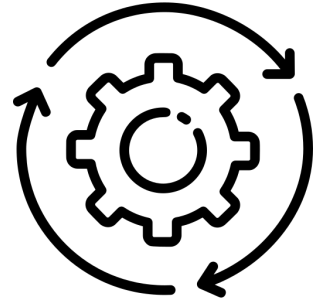

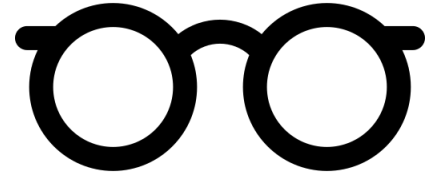

Group 14: Shreya Jois, Lea Abbas, Sweda Rajaram, Sreya Basuroy

Industries:

- Tech and Cybersecurity
- Healthcare
- Advertising: Media and Entertainment

Imported Activities:

- Customer first / patient first mentality
- Subscription model for preventative care
 - EX: Glasses subscription service
- Automation from AI
 - EX: Radiology automation
 - Targeted Advertising

Group 15: Gregory M, Sahil Sarnaik, Rohan Gore, Siddh Mandirwala, Utsav Doshi, Shipra Dagli, Darrel Lung

Industries: Non profit, Tech(Software, AI, data science), Healthcare, Finance

Underlying Principle:

Healthcare is understaffed whereas Tech is always over-staffed to avoid fallout damages. Failing in predicting the real-time view of the demand. Can we better track client/patient flows to more efficiently staff teams? → Not necessarily over-staffing but avoiding under-staffing.

Suggested Actions:

- Tech: Predictive dashboards to surge staff before the ER floods, same as incident response in engineering.
- Finance: Fluid staffing pools, shifted dynamically, like trading desks reallocating by market volatility.
- Non-Profit: One coordinator, many volunteers. Maximum output per person, by necessity.
